

AMT Total Alert with Shooter Detection Systems, LLC offer the most successful integration of solutions in the market today. Combining the industry’s fastest and most reliable gunshot detection product with the world’s fastest mass notification system, AMT Total Alert.

Once a weapon has been fired, two key events instantly occur: An infrared flash and an acoustic bang. The Guardian sensors both “see” and “hear” those events, process the information and declare a shot alert with certainty to the user.

Working together as one solution, the software/sensor capabilities provides pinpoint shot location, instant notification to first responders, alerting via Total Alert to and including social media, indoor and exterior speakers, computer monitors, telephones, mobile devices, and fire alarms.

The customizable software embedded in the Guardian solution monitors the Guardian sensors and provides audio and visual information to the Total Alert Mass Notification system that then sends messages by phone, SMS, email notifications, mobile app and pop up for shot alerts by sending warnings to building occupants and if connected to the emergency personnel. The AMT Total Alert and the Guardian solution is designed to connect to existing client security panel via relay output interface. Total Alert offers easy Integration with third-party security and fire systems.

Call today for a proposal from AMT for Total Alert with the optional upgrade Active Shooter Detection Alert Mass Notification Solution.

Unified Mass Notification Communications, SafeKey, Active Shooter Detection, Beacon Help Station, 4D building, geospatial GPS location, Instant and media situation awareness- AMT, delivering tomorrow solutions today.
