

10 THINGS
YOU
DIDN'T KNOW
ABOUT MSA'S

SMARTTECH™

SmartTech™ can instantly transmit suspect images from X-ray machines anywhere in the world to the MSA Emergency Operations Center.

SmartTech™ provides real-time analysis and X-ray screener support—via instant Voice and text communication—from Certified Bomb Technician Subject Matter Experts.

The MSA SmartTech™ Team is comprised entirely of active and retired bomb squad personnel.

SmartTech™ is a three tier application that communicates across the internet securely via 256-bit SSL encryption to ensure secure connections for image, voice, and text communications. These are client initiated outbound communications only, keeping the client network secure at all times.

SmartTech™ uses a small form factor PC and integrated monitor stand on the client's existing X-ray monitor and the SmartTech™ monitor for a smaller footprint.

SmartTech™ has received **Department of Homeland Security SAFETY Act** designation.

The SmartTech™ PC is built for the SmartTech™ application only. Users are not permitted to freely access the web, load software, or play games on the SmartTech™ PC.

MSA provides onsite X-ray interpretation training for all SmartTech™ customers. Training is presented by Bomb Technicians with screening expertise.

SmartTech™ is operated out of MSA's 24/7 365 Emergency Operations Center (EOC), equipped with disaster recovery capability and backup locations.

Each interaction between MSA Bomb Technicians and client X-ray screeners serves as an opportunity for ongoing training.
