ACTIVE SHOOTER:

Now an Optional Upgrade for TotalAlert by DTA offered by AMT

OWLEY, MASSACHUSETTS (PRWEB) FEBRUARY 09, 2016

Today, Desktop Alert, Inc. and Shooter Detection Systems, LLC announced a successful integration project that combines the industry's fastest and most reliable gunshot detection product with the fastest mass notification system with the TotalAlert Solution. The Guardian Indoor Active Shooter Detection System made national news recently when featured in a TODAY Show exclusive on how to survive an office shooting.

Working together, these capabilities provide pinpoint shot location, instant notification to first responders, alerting via social media, indoor and exterior speakers, computer monitors, telephones, mobile devices, and fire alarms.

407-242-5810 www.amvetmedicaltech.com

Additionally, it automatically conducts a total accountability of on campus personnel and provides real-time personnel status to first responders.

Shooter Detection Systems' underlying technology was developed in conjunction with the Defense Advanced Research Project Agency (DARPA) and is deployed in more than 11,000 systems at over 350 locations worldwide. Desktop Alert, Inc. is a leading provider of emergency mass notification to the Federal Government and Department of Defense. Both companies have successfully deployed their technology protecting troops in Afghanistan and here in the United States in a variety of settings including K-12 Schools, Higher Education, Corporate and Private Sectors.

Christian Connors, SDS CEO, commented, "We are extremely excited that we are successfully integrated with Desktop Alert. We look forward to supporting our mutual customers who will instantly and confidently be able to initiate their active shooter response protocols based on two of the best in class security products in the market today."

Follow Desktop Alert and Shooter Detection Systems on Twitter for announcements about major deployments where Guardian Desktop Alert will work together as an Active Shooter Mitigation Solution. The most recent project between SDS and DTA was a successful integration of the two technologies at a two million square foot convention center, a project to be announced later this year.

About Shooter Detection Systems: <http://www.shooterdetectionsystems.com/>

From its inception, SDS was created with one purpose in mind: to produce the world's most accurate gunshot detection systems. Our systems needed to be not only extremely reliable but also simple to install and easy to use. SDS solutions give customers immediate notification of a shooting event – without complex and expensive interpretation. What has resulted is our pioneering Guardian Indoor Active Shooter Detection System – the first stand-alone, smart sensor for indoor active shooter events. Today, our investment has led to over 5 million hours of installed product use across the country. Our commitment and passion for safety has led SDS to become the gunshot detection solutions provider of choice, dedicated to superior products and satisfied customers.
