AMT has partnered with Patrocinium to additionally provide the leading cloud based, event driven security solution for emergency management and crisis resolution to enterprise clients. Companies will mitigate corporate risk and reduce liability in an emergency by accounting for personnel. Enterprise security officials can efficiently communicate with first responders to ensure help is sent to the right location. Patrocinium Systems aggregates, visualizes and shares real-time data providing actionable intelligence to all stakeholders impacted by and responding to man-made or natural disasters.

ArcAngel is a location based platform that is designed to provide real-time event situational awareness. ArcAngel is agnostic to an organization meaning you can receive alerts based on your current location anywhere you go without being tied to a specific organization. Empowering you, while protecting humanity.

#### **AMT offers the following Arc product solutions by Patrocinium:**

##### **ARCLIVE – MULTIDIMENSIONAL MAPPING**

**ArcLive** is a 4D active mapping tool that provides concurrent detailed “layers” of information for a single operating picture.

Geospatial Awareness – accurately geo-locate and visualize assets within a building down to the floor or manage the world if you are an enterprise user.

Multimedia Visualization – layer different data feeds on a single screen to better visualize what is happening during an event or for day to day information management.

Multiple Map integration – leading mapping technologies that has been proven effective by the government or commercial entities.

Multidimensional Timeline – view events in real-time or for digital auditing you can reverse or fast forward in time with relevant information.

##### **ARCPULSE – REAL-TIME INDICATIONS AND WARNINGS**

**ArcPulse** is an innovative solution to keep a “pulse” on open source and proprietary data relevant to your organization. Multiple data feeds are fused together into one picture giving your organization a picture of what is happening around you while integrating your people locally or on travel, with actionable information.

Real-Time Analytics – automatically monitor open source and proprietary data for trends relevant to your organization

Web-Based Dashboard – track valuable assets in seconds with the touch of a button

Data Fusion – optimize integration of multiple types of information

Notification Tools – receive customizable indicators when resources need attention

Data Synthesizer – combine real-time open source social media data with real-time event data
